DRIVER / REASON FOR SHIELDS

Briefly explain the reason why shields are being considered. Perhaps it is as a result of an accident/incident, insurance or regulatory requirement, corporate directive, hazardous area zoning. This information helps us to identify the correct solution for you.

PURPOSE:

Tell us what you expect from the shield. Typically the main purpose is to prevent spray-out but not contain the leak. However, your requirement may be different. Perhaps oil mist is the main concern, or to provide visual leak indication. Alternatively you may need to contain the leak and divert through drains.

SCOPE:

List specific process lines requiring shields, (eg. 98% sulphuric acid, lubrication oil) and where appropriate, tell us the process temperature and pressure (hydraulic oil at 100Bar pressure / Thermal oil at 250°C).
